

**Gemeinsames Statement von über 500 Organisationen weltweit, gegen Atomkraft und für  
„Sichere, bezahlbare und klimafreundliche Energie für alle“**

## **Sichere, bezahlbare und klimafreundliche Energie für alle**

*(englisch version below)*

**Die internationale Atomlobby wird auf Einladung der Internationalen Atomenergie Agentur IAEA und des belgischen Premierministers am 21. März 2024 einen Atomenergie-Gipfel in Brüssel abhalten. Die Atomlobby tarnt sich hinter einer klimafreundlichen Fassade, in der Hoffnung, auf Kosten der Menschen und des Planeten enorme Geldsummen von echten Klimalösungen abzweigen zu können.**

Die Welt steht vor zahlreichen sozialen, ökologischen und wirtschaftlichen Krisen. Die Menschen sind besorgt über die Lebenshaltungskosten, extreme Wetterereignisse im Zusammenhang mit der Klimakrise und ihre Energierechnungen. Die Lobbyisten und Politiker auf diesem Gipfel werden den Bau neuer Atomkraftwerke als die Antwort präsentieren, aber das hält einem grundlegenden Realitätscheck nicht stand.

**Neue Atomkraftwerke sind zu langsam, um die Klimakrise zu bewältigen.** Bauzeiten neuerer Atomkraftwerke verzögern sich massiv und werden in diesem Jahrzehnt keinen nennenswerten Beitrag zur Senkung der Kohlenstoffemissionen leisten können. Während die Treibhausgasemissionen bis 2030 drastisch gesenkt werden müssen, um den globalen Temperaturanstieg auf weniger als 1,5 Grad zu begrenzen, würden alle heute angekündigten neuen Atomkraftwerke erst weit nach diesem Termin ans Netz gehen. Neue Atomkraftwerke sind ein Ablenkungsmanöver, dass die Energiewende verlangsamt. Eine rasche Abkehr von fossilen Brennstoffen sollte sich stattdessen auf den Aufbau eines zu 100 % aus erneuerbaren Energien bestehenden Energiesystems konzentrieren, verbunden mit Energieeffizienz und Maßnahmen zur Vermeidung eines übermäßigen Energieverbrauchs. Gemeinsam können diese Schritte den Energiebedarf der Welt in einer Weise decken, die fair, umweltfreundlicher und realisierbar ist.

**Atomenergie ist viel teurer als erneuerbare Energien.** Während Atomkraftprojekte aufgrund explodierender Kosten mit enormen Budgetüberschreitungen und Stornierungen zu kämpfen haben, sind erneuerbare Energien billiger als je zuvor und ihre relativen Kosten im Vergleich zur Atomenergie stark rückläufig. Laut dem World Nuclear Industry Status Report 2023 sind neue Atomkraftwerke bis zu viermal so teuer wie Windkraft. Die Regierungen müssen in bewährte Klimalösungen wie Hausisolierung, öffentliche Verkehrsmittel und erneuerbare Energien investieren, statt in teure Experimente wie sogenannte kleine modulare Reaktoren, die auch auf lange Sicht nicht liefern werden.

**Atomenergie ist gefährlich.** Vom Uranabbau bis zu den radioaktiven Abfällen stellt die Atomenergieerzeugung ein Risiko für die Gesundheit, die Sicherheit und die Umwelt der Menschen dar. Die Atomkraft hat immer auch eine militärische Komponente und erhöht das Risiko der Verbreitung von Atomwaffen in der Welt, der Verwendung von angereichertem Uran und von Atombomben. Auch die Klimakrise erhöht die Risiken der Atomkraft, denn zunehmende

Hitzewellen, Dürren, Stürme und Überschwemmungen stellen eine große Gefahr für die Anlagen selbst und für die Systeme zur Verhinderung von Atomunfällen dar.

Wir leben in einer Klimakrise. Die Zeit ist kostbar, und zu viele Regierungen verschwenden sie mit dem Märchen von der Atomenergie. Was wir fordern, ist ein gerechter Übergang zu einem sicheren, erneuerbaren und bezahlbaren Energiesystem, das Arbeitsplätze sichert und das Leben auf unserem Planeten schützt.

### **Folgende Organisationen unterstützen und unterzeichnen diese Erklärung:**

## Joint statement:

# Safe, affordable and climate-friendly energy for all.

**The international nuclear lobby, at the invitation of the International Atomic Energy Agency and the Prime Minister of Belgium, will hold a nuclear energy summit in Brussels on 21 March 2024. The nuclear lobby camouflages itself beneath a climate-friendly facade, hoping to divert massive sums of money away from real climate solutions, at the expense of people and the planet.**

The world faces multiple social, environmental and economic crises. People are worried about the cost of living, extreme weather events linked to climate change, and their energy bills. Lobbyists and politicians at the nuclear energy summit will present building new nuclear power plants as the answer, but this does not pass a basic reality check.

**New nuclear power is too slow to tackle the climate emergency.** Nuclear power plants under development have been severely delayed and won't be able to meaningfully contribute to cutting carbon emissions this decade. Whereas greenhouse gas emissions must be drastically cut by 2030 to limit global temperature rise to less than 1.5 degrees, any new nuclear plants announced today would not be connected to the grid until well past this deadline. New nuclear power plants are a distraction which slows down the energy transition. A rapid shift away from fossil fuels should instead focus on building a 100% renewable energy system coupled with energy efficiency and measures to avoid excessive energy use. Together, these steps can meet the world's energy needs in a way that is fair, environmentally friendly, and achievable.

**Nuclear energy is much more expensive than renewables.** While nuclear projects face huge budget overruns and cancellations due to sky-rocketing costs, renewables are cheaper than ever before, declining sharply in relative costs compared to nuclear. New nuclear power plants are up to nearly four times as expensive as wind power, according to the 2023 World Nuclear Industry Status Report. Governments need to invest in proven climate solutions, such as home insulation, public transport, and renewable energy, rather than expensive experiments, like small modular reactors, which have no guarantees of actually delivering.

**Nuclear power is dangerous.** From mining for uranium to radioactive waste, nuclear power production is a risk to people's health, safety, and the environment. Nuclear power can be used as military targets and increase the risk of spreading nuclear weapons across the world, the use of depleted uranium and atomic bombs. The climate crisis also increases the risks involved in nuclear power, as increased heatwaves, droughts, storms, and flooding all pose significant threats to the plants themselves and to the systems that aim to prevent nuclear accidents.

We are living in a climate emergency. Time is precious, and too many governments are wasting it with nuclear energy fairy tales. What we demand is a just transition towards a safe, renewable and affordable energy system that secures jobs and protects life on our planet.
